

March 09 - Gold Acoustics - The GA Star speaker sports 100dB sensitivity, 8-15 ohm impedance and a frequency response of 40 - 20,000Hz. It employs a horn-loaded Lowther EX2 Hi-Ferric driver in a down-firing bass-reflex enclosure. Gold mirror-finished acoustic brass reflectors work as wave guides for the Lowthers which are internally wired with Van den Hul Goldwater silver-plated cabling. Gold-framed, highly polished granite platforms provide isolation and controlled radiation resistance for the port. Gold-edged domed speaker grills are used for protection and dispersion control of the Lowthers. The matching GA Earth subwoofer is an 8-inch 100-watt unit with line and speaker level inputs. Gold Acoustics hand-crafts their luxury speakers in the UK.
